

THE GDPR

HOW CAN XENSAM HELP YOU?

We don't need to talk about the giant workload that precedes and follows the implementation of the GDPR in May 2018, or the 4% of the revenue fine that an audited incompliance will result in. You are more than likely aware of all the pain points. Let us instead talk about how Xensam can help you in both your GDPR preparation work, and the maintenance work that will follow the implementation next week.

TRACK RISK APPLICATIONS

Xensam's Software Intelligence Library, *Xource*, will detect applications that could cause a potential GDPR risk...

TRACK RISK COMPUTERS

... it will then track on which computers the software is installed, what kind of computers, where they are located...

TRACK RISK USERS

... and what users that have accessed the computers and what kind of GDPR risk application they have used.

REPORTS

There are various prebuild reports that with a single click will give you an overview over your potential GDPR risks.

NUMBER OF CLASSIFIED OBJECTS

40 000 applications

10 000 vendors

Xource don't only classify the risk applications/vendors, but also classifies what vendors that are actually GDPR, DPD and PS/SJ compliant. And the numbers are increasing for every day...
